COALITIONWILD AND THE WILD FOUNDATION PRESENT
NO MORE ENDLINGS
Saving Species One Story at a Time
 by Allison Hegan with Foreword by Wade Davis

LOS ANGELES, CA, November 3, 2015— A blend of storytelling, science, and imagery, ***NO MORE ENDLINGS: Saving Species One Story at a Time*** shares the personal accounts of those working to protect endangered species. Readers of this incredible anthology will gain a fresh look at the lives of some well-beloved species, as well as those lesser-known. Filled with intimate details from each contributor’s journey, as well as inspiration for those of us who may never make it into the jungles of South America or the grasslands of Africa, *No More Endlings* is the perfect read for anyone interested in wildlife, conservation, and a good story. Educators will appreciate the scientific sections that accompany each chapter, and those exploring a career or volunteer opportunities in the conservation realm will especially find this book relevant as it highlights the realities of working in the field. Chapter authors, ranging from National Geographic Explorers, to college professors

and internationally recognized conservationists and activists, will inspire readers to take action and ensure a world with no more endings. [Advance Praise](#) | [Media Contact](#)

About the Editor

ALLISON HEGAN’s appreciation for the natural world was founded at an early age on an overdose of public television’s program *Nature* and family trips to America’s national parks. She later solidified her interest in conservation through volunteering at the Los Angeles Zoo, the Wildlife Waystation and studying terrestrial and marine ecosystems abroad at the University of Queensland in Australia. While not working on *No More Endlings*, she has written several articles dealing with topics such as species genetic diversity, animal self-medication behavior, exotic species issues and more. Allison graduated from the University of Wisconsin-Madison with a degree in People-Environment

Geography and certificates in environmental studies and African studies. Originally from Pasadena, California, she most recently worked for the Wildlife Conservation Society in New York City, and currently designs websites while travelling with her husband, Alastair, a travel nurse.

Allison Hegan is available for interviews, speaking engagements, and book signings.

Advance Praise

"*No More Endlings* draws us into the deeply passionate and personal narratives of those trying to understand, protect, and save some of the most endangered species on the planet. Creatively weaving together the uniqueness of each species with our own human connection to the natural world, *No More Endlings* is a journey that engages, teaches, and shows us why we must truly protect what we love."—**Jean-Michel Cousteau**, Founder of Ocean Futures Society

"*No More Endlings* shares the stories of some real endangered species heroes. It helps us consider our relation to animals and the natural world, introducing a variety of perspectives in an approachable way. Through its mixture of adventure, heart-warming moments, and science, *No More Endlings* should encourage us all to action."—**Dr. Russell A. Mittermeier**, Primatologist, herpetologist, biological anthropologist & president, Conservation International

"Animals go extinct all the time. Allison's animals are examples of just what we lose everyday on our wonderful planet. Animals that will never return. This book asks what we can do and how we can change in the future. Read it. Be the change."—**Dominic Monaghan**, Producer, Actor & Host, *Wild Things with Dominic Monaghan*

"Better than any book I know, *No More Endlings* shows that there are nationals in various countries that do fine research and are devoted to conservation. The book's lively and compelling biographies of rare species around the world by the people who study them and are devoted to their future reveal the joys of exploration and discovery. Whether describing dragonflies, Malagasy rainbow frogs, whooping cranes, or lions, each account celebrates the natural world and encourages us to protect it."—**George B. Schaller**, Panthera & Wildlife Conservation Society, author of *The Last Panda & Tibet Wild*

"Above all, *No More Endlings* is a book of wonder (about amazing species with which we share this planet) and of hope – where a single individual has intervened on behalf of a declining species. This is a book for everyone: to be enjoyed and be inspired by daily. Delightful and uplifting."—**Thomas E. Lovejoy**, National Geographic Fellow, University Professor of Environmental Science and Policy, George Mason University

"This book's combines conservation, information and passion. As a source of reference material it will, I am sure, be turned to by people all over the world wanting to find out more about some of our most threatened and iconic species, but in doing so, readers will also be inspired by the conservation stories of individuals who have, in many cases, dedicated their lives to the protection and, indeed, saving of species. It is personal and it is important and we would all do well to pay attention."—**Will Travers**, OBE, President, Born Free Foundation

"These dispatches from the frontline of conservation introduce some amazing animals but also the real-life heroes trying to save them. Their stories, filled with adventure, science and humour are enough to inspire us all into action"—**Lucy Cooke**, Author, TV Presenter & National Geographic explorer

"*No More Endlings* is a compelling portrayal about a select group of endangered species, but more than that, it is a journey of discovery. It explores the uniqueness of each species, our personal connection with the natural world, and something beyond what the facts can teach, something that cannot quite be understood, but will be missed if it is lost forever."—**Rhett Butler**, President, Writer, & Photographer, Mongabay.com

"From a barefoot banded gecko seeker in San Diego who spent twelve years between single finds, to a snow leopard researcher in Mongolia who augmented pings from a radio collar with learning how to think like one of the secretive cats, Allison Hegan introduces us to the people who have an affinity for those we are on the verge of losing forever. Hornbills and horseshoe crabs, spirit bears and sharks, trees and toads — luckily these life-forms all have their human champions. The stories of how these advocates bonded to some of the world's most amazing "others" will touch you, too, and fire your determination to work for no more endlings, right along with them."—**Candice Gaukel Andrews**, author of *Travel Wild Wisconsin*
